

5 Benefits of Full Stack Disaster Recovery in Oracle Cloud Infrastructure for business leaders

Disaster recovery is an essential service that protects your revenue from extended downtime of business systems. No one wants to experience downtime, but when you do, you need to be ready to recover critical systems within an expected amount of time on a moment's notice. Full Stack Disaster Recovery (DR) helps organizations quickly deliver and maintain reliable disaster recovery in OCI with fewer resources at a lower cost.

Protect your entire estate

Safeguard your entire technology portfolio with the ability to recover multiple business systems simultaneously when disaster strikes.

Maintain a competitive edge

Transform disaster recovery from a cost center into a competitive advantage with a comprehensive solution that orchestrates recovery for enterprise applications.

Minimize overhead

Minimize disaster recovery overhead, enabling greater investment in initiatives that drive competitive advantage and business results.

Test readiness any time

Reduce business risk and operational overhead by validating disaster recovery capabilities through non-disruptive testing that requires minimal resource allocation.

Push button recovery

Protect your market position and customer confidence with rapid recovery of your most critical business assets at the click of a single button.

Ready for the next step?

Learn how easy it is to protect your business-critical systems with OCI Full Stack Disaster Recovery.
